SUMMARY

Full-stack engineer with 4+ years building production systems in banking, HR and e-learning — C# and .NET Core on the backend, React.js and JavaScript on the front. Lead developer on a trading platform serving 4,000+ users. Strongest in performance engineering: removed a 3–4 minute report timeout and cut a 2–3 minute page load to 5–6 seconds.

EXPERIENCE

HDFC Bank (via Clover Infotech) Jul 2025 – Present

Software Engineer, Lead Developer | Navi Mumbai

C#, .NET Core, ASP.NET MVC, Web API, SQL Server, JavaScript

- Led development of a mutual fund and bond trading platform serving **4,000+ active users**, owning the buy/sell transaction modules end to end.
- Built the **ETF, Equity and Structured Notes** product modules for WealthFY Offshore and supported the coordinated go-live and historical data migration — one of the platform's most significant rollouts in the past 2–3 years, delivered with Product, IT, BSG and vendor partners.
- Designed and built multiple transaction and investment forms end to end — dynamic front-end behaviour and client-side validation in JavaScript and jQuery over ASP.NET MVC views and Web API endpoints.
- Cut outbound SWIFT message volume and downstream reconciliation work by redesigning generation to batch multiple transactions into a single consolidated message instead of one per transaction.
- Shipped SWIFT payment settlement and a third-party email notification API, automating post-trade confirmation on every purchase.
- Owned features from ambiguous business requirements through to production, driving scoping with Business Analysts and Product, then build, release and support.

Sodel Software Solutions May 2024 – Jun 2025

Software Engineer | Navi Mumbai

C#, ASP.NET, Entity Framework, Multithreading, JavaScript, MySQL

- Reduced report load time by **80%+** and eliminated recurring HTTP 500 failures by moving generation of 1,000–10,000+ record reports onto background threads, replacing a synchronous flow that blocked the UI for 3–4 minutes; diagnosed, fixed and deployed in one week.
- Improved execution performance **25%** across 15+ pages by restructuring control flow and eliminating redundant loops.
- Enabled Google and Microsoft OAuth sign-in by building custom authentication and authorization middleware with key-based encryption.
- Built responsive, data-driven assessment pages with real-time question counting and percentage scoring, using JavaScript, AJAX and jQuery for live UI updates without page reloads.

Osource Global Nov 2022 – May 2024

Software Developer | Navi Mumbai

C#, .NET Core, ASP.NET, REST APIs, Oracle SQL

- Reduced HRMS page load from 2–3 minutes to 5–6 seconds, lifting user satisfaction **70%** and cutting bounce rate **25%**.
- Cut system errors **50%** and improved stability **20%** by migrating three HRMS products from .NET 4 to .NET 4.8.
- Enabled cross-module data exchange by designing REST APIs in .NET Core over tuned Oracle stored procedures and views.

Greytrix India Apr 2022 – Oct 2022

Junior Software Engineer | Navi Mumbai

ASP.NET MVC, Node.js, React.js, Git

- Migrated a CRM product front end to React.js and Node.js for improved scalability and performance, alongside feature work on the existing ASP.NET MVC application.

PROJECTS

Prycely — Full-Stack E-Commerce Platform — React.js, .NET Core, MongoDB [GitHub](#) · [Live Demo](#) 2024 – Present

- Full-stack e-commerce platform: React front end with hooks-based state and reusable components, a .NET Core REST API, and MongoDB schemas indexed for fast product and order retrieval.

CodeSage — React.js, .net core, MongoDB [GitHub](#) · [Live Demo](#) Dec 2023 – Mar 2024

- React and .NET Core application with secure REST endpoints and a responsive interface; MongoDB-backed data layer for user and content management.

CODING PROFILE

LeetCode **150+** problems solved | [View Profile](#)

Focus areas Arrays, strings, hashing, trees, graphs, dynamic programming; primary language C#.

TECHNICAL SKILLS

Languages	C#, JavaScript (ES6+), SQL, VB.NET, Java, C++
Frontend	React.js, JavaScript (ES6+), jQuery, AJAX, HTML5, CSS3, Bootstrap, Responsive Design
Backend	.NET Core, ASP.NET MVC, Web API, Entity Framework, LINQ, Node.js, Express.js
Databases	SQL Server, Oracle SQL, MySQL, MongoDB
Practices	REST API design, multithreading, performance tuning, OAuth, Git, AWS

EDUCATION

B.Sc. in Computer Science | University of Mumbai, Mumbai, Maharashtra 2017 – 2020
